Dr. John Calhoun has a special interest in reproduction and Idaho Veterinary Hospital is now an ICSB franchise. As a franchise of the International Canine Semen Banks, he will utilize the technologies developed by Prof. Carrol Platz, of ICSB Oregon. Through 30 years of research, Prof. Platz has successfully developed this technique for collection, evaluation and freezing of canine semen. Litters have been produced from frozen semen that has been stored for 34 years prior to thawing, a world record, and insemination at ICSB! Under his direction, this research continues and provides the dog breeder with the most successful program available using fresh, fresh chilled, and frozen canine semen and artificial insemination.
